IHEB HAMDI

Full-Stack Software Engineer | React · Node.js · PostgreSQL · Docker · AI Integration

Barcelona, Spain | +34 677 803 882 | ihebhamdi1@gmail.com | linkedin.com/in/hamdiheb | github.com/hamdiheb

SUMMARY

Full-Stack Software Engineer with a BSc in Computer Engineering, shipping production web applications end to end: React front ends, Node.js/Express REST APIs, PostgreSQL data models, Docker deployments on Google Cloud and LLM-powered features. Built four live full-stack products in 2026, including paid client work integrating a third-party management system and Jobby, a job-search platform aggregating six job-board APIs with authentication built from scratch. Strong in secure backend design, API integration, caching and cost-controlled AI agents; works in Agile/Scrum teams with Git flow, code review and CI/CD, using Claude Code and OpenAI Codex daily.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), SQL, HTML5, CSS3
Frontend: React 19, React Router, Vite, Tailwind CSS, styled-components, GSAP, responsive design
Backend: Node.js, Express (4/5), REST API design, WebSockets, third-party API integration, caching, rate limiting, CORS, input validation
Security & Auth: authentication from scratch, bcrypt, hashed session tokens, cookie/JWT auth, CSRF protection, Postgres Row-Level Security
Data & Cloud: PostgreSQL (hand-written SQL, no ORM), Supabase, Google Cloud, Cloudflare R2 (S3), Vercel, Netlify, Render, Coolify
DevOps & AI: Docker, CI/CD, Git/GitHub, PR review, ESLint; LLM integration (OpenRouter API), AI agents, Claude Code, OpenAI Codex
Practices: Full-Stack Development, System Design, Agile/Scrum, OOP, Algorithms & Data Structures. Academic: Python, Java, C/C++, UML

EXPERIENCE

Full-Stack Developer (Freelance) — AB Auto Centre *Remote (Québec client) · Aug 2026*

Booking site for an auto repair shop, integrated with its GEM-CAR system. React 19, Express 5, Supabase/Postgres, Vercel + Render — abautocentre.com

- Built a bidirectional GEM-SUITE REST API integration: availability = shop hours minus live occupancy; confirmed bookings are written back as client, vehicle, appointment and work order, eliminating manual re-entry and double-booked bays.
- Designed a caching layer for a rate-limited API (single-flight dedup, tiered TTLs, negative caching, stale-on-error, bounded concurrency, *Retry-After* backoff), cutting a 52,756-row catalogue traversal to per-ID lookups of a few dozen records.
- Implemented a timezone-correct availability engine (America/Toronto on a UTC host) with per-hour capacity, a 90-day window and reconciliation preventing double-counted bookings; secured data with Postgres RLS, cookie-based admin auth, rate limiting and a CORS allowlist.

AI Automation Product Manager (Freelance) — Global Sports GmbH *Remote · 2024 – 2025*

- Scoped, tested and shipped internal tools in close collaboration with developers, owning requirements from problem definition through release.
- Led AI integrations that automated repetitive manual workflows, reducing human error, speeding up processes and lowering operating costs by cutting manual workload.

Sales & Operations Lead (Freelance) — ROLEY GmbH *Odesa & Barcelona · 2021 – 2023*

- Started as an international sales representative and was the top seller every month, lifting revenue growth from 12% to 25% through deep product knowledge.
- Promoted to lead the delivery operation in Barcelona, managing and training a team of 10 and building recruitment, onboarding and scheduling processes.
- Improved the company's online reputation, raising its average customer rating from 1.8 to 2.5 stars (+39%) through a better organised, better trained team.

PROJECTS

Jobby — Remote Job Search & Application Tracker *Solo · 2026*

Node.js · Express · PostgreSQL · Docker · Google Cloud · Cloudflare R2 · Vercel · AI agent — jobby-lac-chi.vercel.app

- Searches six job boards at once (RemoteOK, Arbeitnow, Remotive, Jobicy, We Work Remotely, Adzuna), tracks applications and maps nearby employers.
- Built auth from scratch (bcrypt, hashed session tokens, CSRF protection, rate limiting) on PostgreSQL with hand-written SQL, no ORM.
- Added direct uploads to Cloudflare R2 via presigned S3 URLs; containerised backend and database with Docker on Google Cloud, frontend on Vercel.
- Integrated an AI agent that discovers companies, with validation of its answers and hard caps on LLM cost.

PikPilot — AI-Powered Movie Discovery Platform *Solo · 2026*

React 19 · Vite · Express 5 · Tailwind CSS · GSAP · OpenRouter · TMDB API · Netlify · Render — pikpilot.netlify.app · github.com/hamdiheb/PIKPILOT

- Architected a system that turns plain-language requests into film recommendations, pairing an LLM with the TMDB API so every result is verified against real data; 5-endpoint REST API with per-IP rate limiting, strict CORS and input validation.
- Hardened the AI pipeline against non-deterministic output: sanitised JSON, dropped unresolvable titles, de-duplicated by ID, and removed out-of-order race conditions with debounced search.

GuessWho — Full-Stack Multiplayer Social Game *3-person team · 2026*

React · Express 5 · Postgres (Supabase) · OpenRouter · Netlify · Render — guesswhomigracode.netlify.app · github.com/hamdiheb/GuessWhoProject

- Engineered the game end to end (React, Express REST API, PostgreSQL); designed core gameplay logic, led the visual redesign and built an AI question generator.
- Authored 52 of 106 commits across 28 merged pull requests in a branch-per-feature Git flow with peer review.

EDUCATION

Full-Stack Web Development — MigraCode Barcelona *Oct 2025 – Jun 2026*

800+ hours: JavaScript, React, Node.js, Express, PostgreSQL, REST APIs, WebSockets, Git, Agile delivery.

BSc Computer Engineering — Odessa Polytechnic National University *Sep 2019 – Jun 2022*

Coursework: Python, Java, C++, OOP, UML, Algorithms & Data Structures.
