

IHEB HAMDI

Full-Stack Software Engineer

Barcelona, Spain | +34 677 803 882 | ihebhamdi1@gmail.com | linkedin.com/in/hamdiheb | github.com/hamdiheb

SUMMARY

Full-stack software engineer with a Computer Engineering background, shipping production web systems end to end — REST APIs, relational data models and React front ends. Delivered a freelance booking platform with a bidirectional third-party API integration, resilient caching and Postgres Row-Level Security, plus an LLM-integrated recommendation pipeline hardened against non-deterministic output. Works across the full stack from system design to UI implementation, in Agile/Scrum teams with Git-based code review and CI/CD, using AI-assisted tooling (Claude Code, OpenAI Codex) to move faster without cutting corners.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), SQL, HTML5, CSS3

Frontend: React 19, React Router, Vite, Tailwind CSS, styled-components, GSAP, responsive design

Backend: Node.js, Express (4/5), REST API design, WebSockets, JWT/session/cookie authentication, caching, rate limiting, CORS, input validation

Data & Cloud: PostgreSQL, Supabase, Row-Level Security, Vercel, Netlify, Render, Coolify

DevOps & Tooling: Git/GitHub, pull request review, Docker, CI/CD, oxlint/ESLint, npm

AI Tools: Claude Code, OpenAI Codex, OpenRouter API (LLM integration) — used daily for coding, debugging and shipping AI-powered features

Practices: Full-Stack Development, Agile/Scrum, code review, third-party API integration, System Design, OOP, Algorithms & Data Structures. Academic: Python, Java, C/C++, UML (coursework, not current stack)

EXPERIENCE

- Product Manager (Freelance) — Global Sports GmbH**

Remote · 2024 – 2025

 - Scoped, tested and shipped internal tools with developers, including AI integrations that automated manual workflows.
- Manager of Delivery Services (Freelance) — ROLEY GmbH**

Barcelona · 2022 – 2023

 - Led a team of 10; built recruitment, training and scheduling processes.
- Sales Representative (Freelance) — ROLEY GmbH**

Odesa · 2021 – 2022

 - Handled international sales calls, consistently exceeding targets.

PROJECTS

- AB Auto Centre — Full-Stack Developer**

Freelance · Aug 2026

Booking and vitrine site for a Québec auto repair shop, integrated with the garage's existing GEM-CAR management system. React 19, Express 5, Supabase/Postgres, deployed on Vercel + Render.

 - Built a bidirectional integration with the GEM-SUITE REST API: public availability is computed as shop hours minus live GEM occupancy, and confirmed bookings are written back to GEM as a client record, vehicle, agenda appointment and work order — eliminating manual re-entry and preventing double-booked bays.
 - Designed a caching layer around a rate-limited third-party API (single-flight deduplication, tiered TTLs, negative caching, stale-on-error fallback, bounded concurrency, *Retry-After-aware* backoff), cutting a 52,756-row catalogue traversal down to per-id resolution of the few dozen records actually in use.
 - Implemented a timezone-correct availability engine (America/Toronto vs. a UTC host) with per-hour capacity, a 90-day booking window, closure handling and reconciliation logic preventing double-counted bookings; reads fail closed, writes fail open.
 - Secured customer data with Postgres Row-Level Security (insert-only public policy), cookie-based admin auth, rate limiting and a CORS allowlist; delivered a French-language front end with a staff admin dashboard and Supabase-driven editorial content the owner can update without code changes.
- PikPilot — AI-Powered Movie Discovery Platform**

Solo · 2026

React 19 · Vite · Express 5 · Tailwind CSS · GSAP · OpenRouter · TMDB API · Netlify · Render — pikpilot.netlify.app · github.com/hamdiheb/PIKPILOT

 - Architected a full-stack system that turns plain-language requests into film recommendations, pairing an LLM with the TMDB API so every result is verified against real data.
 - Designed a 5-endpoint Express REST API with per-IP rate limiting, strict CORS and input validation, keeping credentials server-side.
 - Hardened the AI pipeline against non-deterministic output: sanitised JSON, dropped unresolvable titles, de-duplicated by ID, and eliminated race conditions from out-of-order responses with debounced search.
- GuessWho — Full-Stack Multiplayer Social Game**

3-person team · 2026

React 19 · Express 5 · PostgreSQL (Supabase) · OpenRouter API · Netlify · Render — guesswhomigracode.netlify.app · github.com/hamdiheb/GuessWhoProject

 - Engineered a multiplayer game end to end (React frontend, Express REST API, PostgreSQL data layer); designed core gameplay logic, led the visual redesign, and built an AI question generator on the OpenRouter API.
 - Worked in a branch-per-feature Git flow with peer review; authored 52 of 106 commits across 28 merged pull requests.

EDUCATION

- Full-Stack Web Development — MigraCode Barcelona**

Oct 2025 – Jun 2026

 - 800+ hours: JavaScript, React, Node.js, Express, PostgreSQL, REST APIs, WebSockets, Git, Agile delivery.
- BSc Computer Engineering — Odessa Polytechnic National University**

Sep 2019 – Jun 2022

 - Coursework: Python, Java, C++, OOP, UML, Algorithms & Data Structures.
