IHEB HAMDI

Full-Stack Developer | React · Node.js · PostgreSQL · Docker · AI Integration

Barcelona, Spain | +34 677 803 882 | ihebhamdi1@gmail.com | linkedin.com/in/hamdiheb | github.com/hamdiheb

SUMMARY

Full-Stack Developer with a BSc in Computer Engineering, building reliable web products that help businesses grow, save time and cut manual work. Strong in React and Node.js from front end to back end, secure API design, third-party integrations and AI-powered features. Multilingual (Arabic, English, French, Spanish), energetic and a natural team player in Agile/Scrum environments, who also delivers independently for clients, from requirements to production.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), SQL, Python, Java, C/C++
Frontend: HTML5, CSS3, React 19, React Router, Vite, Tailwind CSS, styled-components, GSAP
Backend: Node.js, Express (4/5), REST API design, WebSockets, third-party API integration
Security & Auth: authentication from scratch, bcrypt, hashed session tokens, cookie/JWT auth, CSRF protection, Postgres Row-Level Security
Data & Cloud: PostgreSQL, Supabase, Google Cloud, Cloudflare R2 (S3), Vercel, Netlify, Render, Coolify
DevOps & AI: Docker, Kubernetes (fundamentals), CI/CD, Git/GitHub, ESLint; LLM integration (OpenRouter API), AI agents, Claude Code, OpenAI Codex
Practices: Full-Stack Development, System Design, Agile/Scrum, OOP, UML, Algorithms & Data Structures

EXPERIENCE

Full-Stack Developer (Freelance) — AB Auto Centre *Remote (Québec client) · Aug 2026*

Booking site for an auto repair shop, integrated with its GEM-CAR system. React 19, Express 5, Supabase/Postgres, Vercel + Render — abautocentre.com

- Built a booking platform with a bidirectional GEM-SUITE REST API integration: availability = shop hours minus live occupancy, kept consistent in both systems by refreshing and checking the current database against GEM-SUITE; confirmed bookings are written back as client, vehicle, appointment and work order, eliminating manual re-entry and double-booked bays.
- Designed a caching layer for the rate-limited API (single-flight dedup, tiered TTLs, negative caching, stale-on-error, bounded concurrency, *Retry-After* backoff), cutting a 52,756-row catalogue traversal to per-ID lookups of a few dozen records.
- Implemented a timezone-correct availability engine (America/Toronto on a UTC host) with per-hour capacity, a 90-day window and reconciliation preventing double-counted bookings; secured data with Postgres RLS, cookie-based admin auth, rate limiting and a CORS allowlist.
- Created a responsive, mechanic-themed design for desktop and mobile users and optimised SEO and GEO for better search matching, driving 50% booking growth in the first month, faster Google indexing and rising impressions with no paid advertising.

AI Automation Product Manager (Freelance) — Global Sports GmbH *Remote · 2024 – 2025*

- Organised and developed internal tools in close collaboration with developers, owning requirements from problem definition through release.
- Automated repetitive manual workflows through AI integrations, reducing human error, speeding up processes and lowering operating costs by cutting manual workload.

Sales & Operations Lead (Freelance) — ROLEY GmbH *Odesa & Barcelona · 2021 – 2023*

- Operated as an international sales representative and was the top seller every month, increasing company sales by lifting revenue growth from 12% to 25% through deep product knowledge.
- Directed the delivery operation in Barcelona, managing and training a team of 10 and building recruitment, onboarding and scheduling processes.
- Developed the company's online reputation, raising its average customer rating from 1.8 to 2.5 stars (+39%) through a better organised, better trained team.

PROJECTS

Jobby — Remote Job Search & Application Tracker *Solo · 2026*

Node.js · Express · PostgreSQL · Docker · Google Cloud · Cloudflare R2 · Vercel · AI agent — jobby-lac-chi.vercel.app

- Searches six job boards at once (RemoteOK, Arbeitnow, Remotive, Jobicy, We Work Remotely, Adzuna), tracks applications and maps nearby employers.
- Built auth from scratch (bcrypt, hashed session tokens, CSRF protection, rate limiting) on PostgreSQL with hand-written SQL, no ORM.
- Added direct uploads to Cloudflare R2 via presigned S3 URLs; containerised backend and database with Docker on Google Cloud, frontend on Vercel.
- Integrated an AI agent that discovers companies, with validation of its answers and hard caps on LLM cost.

PikPilot — AI-Powered Movie Discovery Platform *Solo · 2026*

React 19 · Vite · Express 5 · Tailwind CSS · GSAP · OpenRouter · TMDB API · Netlify · Render — pikpilot.netlify.app · github.com/hamdiheb/PIKPILOT

- Architected a system that turns plain-language requests into film recommendations, pairing an LLM with the TMDB API so every result is verified against real data; 5-endpoint REST API with per-IP rate limiting, strict CORS and input validation.
- Hardened the AI pipeline against non-deterministic output: sanitised JSON, dropped unresolvable titles, de-duplicated by ID, and removed out-of-order race conditions with debounced search.

GuessWho — Full-Stack Multiplayer Social Game *3-person team · 2026*

React · Express 5 · Postgres (Supabase) · OpenRouter · Netlify · Render — guesswhomigracode.netlify.app · github.com/hamdiheb/GuessWhoProject

- Engineered the game end to end (React, Express REST API, PostgreSQL); designed core gameplay logic, led the visual redesign and built an AI question generator.
- Authored 52 of 106 commits across 28 merged pull requests in a branch-per-feature Git flow with peer review.

EDUCATION

Full-Stack Web Development — MigraCode Barcelona *Oct 2025 – Jun 2026*

800+ hours: JavaScript, React, Node.js, Express, PostgreSQL, REST APIs, WebSockets, Git, Agile delivery.

BSc Computer Engineering — Odessa Polytechnic National University *Sep 2019 – Jun 2022*

Coursework: Python, Java, C++, OOP, UML, Algorithms & Data Structures.
